

FOR IMMEDIATE RELEASE:

GreenWare partners with StrikeForce to market GuardedID®, the world's leading keystroke encryption software to protect banks and their customers.

Edison, NJ (May 27th, 2010) – StrikeForce Technologies, Inc. (SFOR.OB), a company that specializes in the prevention of Identity Theft, announced today that GreenWare Corporation, a leading distributor of cost reducing technologies, will be marketing GuardedID's award-winning security software to businesses and consumers. GuardedID eliminates the risk of keylogging spyware (spyware that records every keystroke entered) by encrypting them at the keyboard level. GuardedID also eliminates one of spyware's latest tools – clickjacking.

GreenWare will have a primary focus on selling GuardedID to banks and other financial institutions due to their strong need for data security and regulatory compliance.

“Banking and financial institutions have strict rules about websites their employees can visit. They are not allowed to do much, if any, personal business on business PCs,” says Carl Krueger, GreenWare's Chief Financial Officer. “However, spyware still gets through the security in place and onto their system. If it does, a keylogger can see every keystroke that an employee types giving the cyber-thief what they need to get into their core information systems. Keylogging spyware on employee's computers has been the cause of many data breaches and millions of dollars stolen at some of the world's top banks.”

GuardedID is the only truly-proactive software to render keylogging and click-jacking attacks useless. Anti-virus and anti-spyware programs are always playing catch up to the latest threats, leaving a security hole for spyware to be installed on employees' systems. With GuardedID, even if keylogging spyware is present, it will have no impact because the criminal will not see the actual keystrokes typed. GuardedID's patent pending approach encrypts each and every keystroke, then reroutes those encrypted keystrokes via its own separate and secure data channel, therefore all the keylogger sees is a string of meaningless numbers. “We are very excited about our new partnership with GreenWare”, says Mark L. Kay, CEO of StrikeForce. “The folks at GreenWare have dedicated themselves to providing banks with the world's most secure, cost efficient & user-friendly Identity Theft prevention software. For the bank, GuardedID protects usernames and passwords when employees are logging into the banking networks or accessing banking databases. For the consumer, GuardedID protects online banking and online bill pay credentials.”

About StrikeForce Technologies, Inc.

StrikeForce Technologies manufactures security products which help prevent “online” identity theft. Its products help protect consumers and their families when banking, shopping and emailing on the internet. StrikeForce's Enterprise security products help businesses authenticate remote access employees and customers, as well as help prevent data loss due to malicious spyware, all in "real time". StrikeForce Technologies, Inc. (OTC.BB: SFOR.OB - News) is headquartered in Edison, N.J., and can be reached at www.strikeforcetech.com or by phone at (732) 661-9641 or toll-free at (866) 787-4542.
